Cellular Localization Cell membrane; Single-pass type I membrane protein. Early endosome membrane; Singlepass type I membrane protein . Recycling endosome membrane ; Single-pass type I membrane protein. Associates with CMTM6 at recycling endosomes, where it is protected from being targeted for lysosomal degradation. .; [Isoform 1]: Cell membrane; Single-pass type I membrane protein .; [Isoform 2]: Endomembrane system; Single-pass type I membrane protein.

Tissue specificity Highly expressed in the heart, skeletal muscle, placenta and lung. Weakly expressed in the thymus, spleen, kidney and liver. Expressed on activated T- and B-cells, dendritic cells, keratinocytes and monocytes.

Function

Involved in the costimulatory signal, essential for T-cell proliferation and production of IL10 and IFNG, in an IL2-dependent and a PDCD1-independent manner. Interaction with PDCD1 inhibits T-cell proliferation and cytokine production, induction: Up-regulated on T- and Bcells, dendritic cells, keratinocytes and monocytes after LPS and IFNG activation. Upregulated in B-cells activated by surface Ig cross-linking., similarity: Belongs to the immunoglobulin superfamily. BTN/MOG family., similarity: Contains 1 Ig-like C2-type (immunoglobulin-like) domain., similarity: Contains 1 Ig-like V-type (immunoglobulin-like) domain., subunit: Interacts with PDCD1., tissue specificity: Highly expressed in the heart, skeletal muscle, placenta and lung. Weakly expressed in the thymus, spleen, kidney and liver. Expressed on activated T- and B-cells, dendritic cells, keratinocytes and monocytes.,
